## Projects

- **Chatwell AI**                                                                       https://app.writeoutloud.app/
  - This project works to record the thought and transcribe it. Then all thoughts within a login session combine together and generate a story in text and audio format.
  - **Technology**: ReactJS, Redux Toolkit, Tailwind, Django, Postgres, OpenAI.
  - **Responsibilities**: Create UI and Integrate rest api for all the required functionality. Record audio of the thought using a mic. Play recorded audio and generated stories. Export stories in pdf format.

- **Kaboodle AI**                                                                       https://www.kaboodleai.com
  - This project works to generate four different responses to a given prompt. It also has the functionality to change the tone of response for each LLM.
  - **Technology**: ReactJS, Redux Toolkit, Tailwind, NodeJS, MongoDB, OpenAI, Amazon Bedrock.
  - **Responsibilities**: Create UI for all the pages in the app. Create and integrate rest api for all the required functionality. Integrate Amazon bedrock api for the LLM and OpenAI api. Generate history of the previous prompt. Generate mongoDB schema to store the data.

- **Engage AI**                                                                        http://191.101.232.33:5173/
  - This project works to analyze the uploaded resumes and result in the score according to the job requirement. It is used to analyze and sort the user candidate for the practical interview.
  - **Technology**: ReactJS, Redux toolkit, Tailwind, NodeJS, postgresql, Django, Stability AI.
  - **Responsibilities**: Create UI and Integrate rest api for all the required functionality. Implement functionality to logout the user if it is not active for a long time. Implement the functionality to break the multiple resumes in chunks uploaded at once.

- **Heartbeat Design**                                                                 https://www.heartbeat.design/
  - This project works on IVF hospitals to provide complete solutions to manage their work like: registration, Billing, Appointment Scheduling, Pharmacy Department management, OPU Management etc. It provides three login interfaces (Admin, Super Admin, Clinic Staff).
  - **Technology**: ReactJS, Material UI, Devexpress React Scheduler, Apex Chart, High chart, Java, Mysql, PDF Generator.
  - **Responsibilities**: Create UI and Integrate rest api for all the required functionality. Create a drag and drop functionality to manage the Laboratory module for test reports. Register patients and Create appointment schedules with Dr.

...Many More...

---

## Skills

**Frontend**: React JS, Tailwind, Material UI, Redux & Redux toolkit, HTML, CSS, JavaScript.
**Backend**: NodeJS, ExpressJS, Socket, Session, EJS, Mongoose
**Database**: MongoDB
**Version Control**: Git, GitHub, GitLab, BitBucket.
**AI Integration**: Open AI, Amazon Bedrock (Mistral, Cohere, Claude, Lama)
